

Internal Assessment Instructions

Name _____

Move To Improve

- This assessment task is for use in **12PED**.
- The Learning Leader(s) who will use this assessment task is/are **TE, BN**.
- This assessment is aligned to the NZC area **Health and Physical Education**.
- You must submit your work for this assessment by **Friday 3rd July**.
- This submission date is **Deadline**.
- **Your work for this assessment is covered by your signed DECLARATION OF AUTHENTICITY**

NCEA Standard Information	
This assessment task assesses standard number 91329v2 .	
The full title of the standard is Demonstrate understanding of the application of biophysical principles to training for physical activity .	
This standard has a credit value of 4 cr and is a Level 2 Achievement standard .	
The grades available for this standard are N, A, M and E .	
L1 Literacy: No	Numeracy (all levels): No
University Entrance Literacy: No	Contribution to UE Lit: None
UE approved: No	UE subject(s)
Vocational Pathways Contributions	
Construction and Infrastructure: No	Manufacturing and Technology: No
Primary Industries: No	Service Industries: Recommended
Social and Community Services: Recommended	Creative Industries: Sector related

Final Grade		Comments
Not Achieved (N)	●	
Achieved (A)	●	
Merit (M)	●	
Excellence (E)	●	
Marker Initials:		
Date:		

Achievement Criteria

Achievement	Achievement with Merit	Achievement with Excellence
Demonstrate understanding of the application of biophysical principles to training for physical activity.	Demonstrate in-depth understanding of the application of biophysical principles to training for physical activity.	Demonstrate comprehensive understanding of the application of biophysical principles to training for physical activity.

Learner Instructions

This assessment activity requires you to write a report on a **4-week minimum** personal training programme that you have devised and implemented, to **improve physical performance in the Tough guy and Tough gal challenge 2026 on Thursday 18th June**. In your report you will evaluate the application of relevant biophysical principles to the training.

Although your training programme is not assessed, you need to complete it so that you will have the experience and information you will require for your report. You are required to hand in your training programme as supporting evidence. Each reflection must differ day to day.

You will be assessed on the depth and comprehensiveness of your understanding, and on how well you justify your explanations and evaluations with evidence from your own experience. You will be assessed against your registered timed result from the Tough guy and Tough gal challenge 2026.

Required Terminology

Biophysical Principles			
Principles of training (POT)	Methods of training (MOT)	Exercise physiology	Sports psychology
- Specificity - Progression / overload - Reversibility - Rest - Time - Frequency - Intensity - Type	- Continuous - Interval - Circuit - Flexibility -Resistance/weight - Plyometrics	- Muscular systems - Energy systems - Respiratory and cardiovascular systems	- Motivation - Self-talk - Visualization - Mental rehearsal - Routines - Arousal control - Goal setting - Confidence - Concentration

Planning

Your training is to be designed around improving your physical performance to compete in the Tough guy and Tough gal challenge 2026.

Goal: At the end of my four week training programme I would like to	
Measure: I will know I have achieved my goal when I can	
Pre Test: Currently before training I can	
Principles of Training: Two principles of training I plan to use in my training programme are.....and	These will be the most beneficial because
Methods of Training: Two methods of training I plan to use in my training programme are and	These will be the most beneficial because ...
Sports Psychology: Two types of sports psychology I plan to use in my training programme are and	These will be the most beneficial because
Exercise Physiology: The system I will be improving is	
This is because	
The muscles I will be focusing on will be	
This is because	

Training Programme

Week One Training Programme

Date:	Workout Plan: include principles and methods of training, distance, time, repetitions, weights and intensity when required.	Reflection: include the intensity worked at, how you felt, your progress, sport psychology used & what you would change for the next workout.
EXAMPLE	Warm up - 5 minute easy jogging/stretching Continuous running on 1km lap around school grounds, 6/10 effort and pace for 30 minutes. Recording total laps. Tedium - can run with partner to aid motivation Specific - set lap target based on own fitness level	What was good about the session? What did you enjoy? How was the difficulty? What did you do to help your motivation? Were you tired or well rested? What was your energy level like? Did you have the correct gear? Did you use music to help your motivation? Did you train with others? How was your training helping you prepare for TGTG? What was similar or different?
Monday 18.5		
Tuesday 19.5		
Wednesday 20.5		
Thursday 21.5		
Friday 22.5		
Saturday 23.5		
Sunday 24.5		

7 Day Reflection: include how you feel, current progress & what will you change for the following 7 days.
Evidence: This could be screenshots / photos

Evidence: This could be screenshots / photos

Week Two Training Programme		
Date:	Workout Plan: include principles and methods of training, distance, time, repetitions, weights and intensity when required.	Reflection: include the intensity worked at, how you felt, your progress, sport psychology used & what you would change for the next workout.
Monday 25.5		
Tuesday 26.5		
Wednesday 27.5		
Thursday 28.5		

Friday 29.5		
Saturday 30.5		
Sunday 31.5		
7 Day Reflection: include how you feel, current progress & what will you change for the following 7 days. How ready do you feel to compete?		
Evidence: This could be screenshots / photos		

Week Three Training Programme		
Date:	Workout Plan: include principles and methods of training, distance, time, repetitions, weights and intensity when required.	Reflection: include the intensity worked at, how you felt, your progress, sport psychology used & what you would change for the next workout.
Monday 1.6		

Tuesday 2.6		
Wednesday 3.6		
Thursday 4.6		
Friday 5.6		
Saturday 6.6		
Sunday 7.6		

7 Day Reflection: include how you feel, current progress & what will you change for the following 7 days. How ready are you to compete?

Evidence: This could be screenshots / photos

Week Four Training Programme		
Date:	Workout Plan: include principles and methods of training, distance, time, repetitions, weights and intensity when required.	Reflection: include the intensity worked at, how you felt, your progress, sport psychology used & what you would change for the next workout.
Monday 8.6		
Tuesday 9.6		
Wednesday 10.6		
Thursday 11.6		
Friday 12.6		
Saturday 13.6		

Sunday 14.6		
7 Day Reflection: include how you feel, current progress & what will you change for the following 7 days. How ready are you to compete?		
Evidence: This could be screenshots / photos		

Week Five Training Programme		
Date:	Workout Plan: include principles and methods of training, distance, time, repetitions, weights and intensity when required.	Reflection: include the intensity worked at, how you felt, your progress, sport psychology used & what you would change for the next workout.
Monday 15.6		
Tuesday 16.6		
Wednesday 17.6		
3 Day Reflection: include how you feel, current progress & what will you change for the following 3 days. How ready are you to compete?		
Evidence: This could be screenshots / photos		

Reflection

Post test: After 4 weeks of training I can

Methods of training: The two methods of training that were most beneficial to achieving my goal were and

This is because

The method of training that was least beneficial was

This is because

Principles of training: The two principles of training that were most beneficial to achieving my goal were and

This is because

The principle of training that was least beneficial was

This is because

Sports psychology: The two types of sports psychology that were most beneficial to achieving my goal were and

This is because

The type of sports psychology that was least beneficial was

This is because

Exercise physiology: The energy system I improved was (Anaerobic, Aerobic and / or ATP-PC)

This is because

The muscles I focused on improving were

This is because

Assessment Task - Report

Task 1. Outline the training programme you developed.

- Describe your goal and the reasons why you selected it.
- Outline and describe your training programme. Include any sports psychology, principles and methods of training you used.

My goal for the TGTG challenge was...

I selected this goal because (3 reasons)...

How long did we train for in total?

We did a pre test fitness test to determine our fitness levels. (bleep test)

We trained mainly around Alfriston College. Did you train anywhere else? Did you add on this training to your other trainings?

We used multiple methods of training - name them all and give examples of what they are.

Who did we train with? Solo or in groups?

How many sessions a week?

What principles of training (SPORT and FITT) did you use in your training?

What sport psychology did you use? (goal setting, visualisation and positive self talk)

Task 2. Explain fully how you applied those particular methods and principles of training to your programme, and why.

- What sports psychology, methods and principles of training did you use in your training? Give your own definition for each.
- How did you use each of them in your training programme? Give descriptive and specific examples from your programme.
- Why did you use them? Explain why each of the methods and principles of training you used in your programme to achieve your goal.

Task 3. Evaluate the methods and principles of training (and any other biophysical principles) that you applied to your programme by discussing their strengths and weaknesses, and the interrelationship between them. Support and justify your evaluation with evidence from your own experience.

- *What types of sports psychology, methods or principles of training were a strength in your training programme and achieving your goal. Describe how by giving examples from your training. Explain why they were a strength and the impact it had on your goal.*
- *What types of sports psychology, methods or principles of training were a weakness in your training programme and achieving your goal. Describe how by giving examples from your training. Explain why they were a weakness and the impact it had on your goal.*
- *What had the biggest positive impact on your motivation levels? Give specific examples from your training and explain why.*
- *What had the biggest negative impact on your motivation levels? Give specific examples from your training and explain why.*

4. Describe what modifications you would make to the application of biophysical principles in your training programme, and explain why.

- Do you feel your goal was too easy or too difficult? Explain why and the impact this had on your training and results.
- If you were to do the three week programme again would you change your goal? Explain why and the changes you would make.
- Select another type of sports psychology, method or principle of training that you feel was not beneficial towards your training. Use examples from your training programme to help explain why.
- What would change or do differently if you were to do the 3 week training programme again. Explain why.

Assessment Marking Schedule 2026

Demonstrate understanding of the application of biophysical principles to training for physical activity AS91329 v2 (4 cr)

	A	M	E
The learner demonstrates an understanding that involves: • Identifying the biophysical principles being applied • Explaining how and why biophysical principles are applied to training • Uses examples from own experience			
The learner demonstrates in-depth understanding that involves: • Explaining, in detail, how and why biophysical principles are applied to training • Explaining interrelationships between the biophysical principles • Uses examples from own experience			
The learner demonstrates comprehensive understanding that involves: • Evaluating how and why biophysical principles are applied to training • Evaluating clear interrelationships between biophysical principles • Uses examples from own experience Evidence may include: • What biophysical principle(s) are the most/least beneficial when applied to training and reasons why they applied to the training supported with specific examples from own experience • Changes/modifications made to improve their training
