

# Welcome to Level 2 ped 2026 Term 2

Do now

In pairs - a to z

Write down as many words you know related to fitness training or the gym

Wait for the timer!

Winners get a prize!

# Learning intention

## Learning intention

- Make sense of 2.3 and 2.4 assessments

## Learning intention

- Name due dates, credit amount for both assessments
- Name the SPORTFIT principles

# Assessment feedback

## 2.5 what makes a tgtg?

- Undergoing moderation
- Marks likely to be given by end of the week
- Most that handed in
- 5 learners Did Not Submit - will not be able to resubmit at all!
- 90% of learners that handed in passed
- Time management is key

# Term 2 assessments

## 2.3 move to improve

- Training Programme
- Training towards 2.1 TGTG Practical Performance
- Requires a Training programme & a Fitness Goal
- 4 credits
- Understanding of biophysical training principles
  - Principles of Training
  - Methods of Training
  - Exercise Physiology
  - Sports Psychology

# Term 2 assessments

## 2.4 tgtg practical performance

- Practical Performance
- TGTG Challenge
- Obstacle Run over 6km
- 4 credits
- Time standards
- Day trip to Hamilton
- Due Date: Thursday 18  
June, Week 9

# Term 2 assessments

## 2.4 tgtg practical performance

**GUIDE ONLY 2025 – Tough Guy/Gal Achievement Standard Final Times – Hamilton**

| Hamilton – Level 2 | Excellence (mins.secs) | Merit (mins.secs) | Achieved (mins.secs) |
|--------------------|------------------------|-------------------|----------------------|
| <b>Male</b>        | Under 36.09            | 36.09 – 50.55     | 50.56 – 85.01        |
| <b>Female</b>      | Under 43.19            | 43.19 – 57.24     | 57.25 – 86.18        |

*\*These times can be changed due to moderation. The 2026 fastest time and slowest time will be used to find the median.*

# Level 2 PED

## Weds 22 april

### Lesson 2

# Do now

**Do now** - Whether or not you were here yesterday, grab a whiteboard marker and write down all the things you know about the following under each heading

**2.3 Move to Improve**  
**Principles of Training**

**2.4 TGTG Challenge**

**S  
P  
O  
R  
T  
  
F  
I  
T**

# Learning intention

## Learning intention

Make sense and building knowledge of the Principles of Training

## Success criteria

- Name all the SPORT FIT Principles of Training
- Define what Principles of Training are
- Explain at least 3-5 Principles of Training

Ila's: Thinking, Curious

# Principles of training

## Principles of training

A set of guidelines or rules used to plan and carry out exercise that improves body fitness

**SPORT FIT** is the acronym used to understand the principles:

SPECIFICITY

PROGRESSIVE

OVERLOAD

REST

TIME

FREQUENCY

INTENSITY

TYPE

# specificity

## What is specificity?

Training that is specifically matched to the activity being trained for.  
**SPECIFICITY** is broken down into the following areas:

- Fitness Components (eg strength, aerobic)
- Movement Patterns (eg jumping)
- Speed of Movement (eg: slow or fast)
- Duration (eg: short, long, continuous)
- Environment (eg outdoor, indoor, grass, court, turf)

| Physical requirements of a 100 m sprinter |                                  | Example training activities<br>(perform each activity<br>3 times, with 5 minutes of<br>rest in between)                                                                                                                        |
|-------------------------------------------|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Fitness components                        | Speed, muscular power            | <ul style="list-style-type: none"><li>• 12 tuck jumps (jump up in the air and lift knees up towards chest)</li><li>• 50 m hill sprint</li><li>• 4 × 20 m block starts</li><li>• Stair hop (20 stairs using each leg)</li></ul> |
| Movement patterns                         | Sprint, knee lift, arm/leg drive |                                                                                                                                                                                                                                |
| Speed of movement                         | Fast and explosive               |                                                                                                                                                                                                                                |
| Duration                                  | Short and intermittent           |                                                                                                                                                                                                                                |
| Environment                               | Outdoor track                    |                                                                                                                                                                                                                                |

# specificity

## Learning task (we do)

Let's look at the SPECIFICITY of Training for a WEIGHTLIFTER

| Physical requirements of a Weightlifter |  | List three training activities specific for a Weightlifter |
|-----------------------------------------|--|------------------------------------------------------------|
| Fitness Components                      |  |                                                            |
| Movement patterns                       |  |                                                            |
| Speed of Movement                       |  |                                                            |
| Duration                                |  |                                                            |
| Environment                             |  |                                                            |

# specificity

## Learning task (YOU do)

Let's look at the SPECIFICITY of Training for a MARATHON RUNNER

| Physical requirements of a Marathon Runner |  | List three training activities specific for a Marathon Runner |
|--------------------------------------------|--|---------------------------------------------------------------|
| Fitness Components                         |  |                                                               |
| Movement patterns                          |  |                                                               |
| Speed of Movement                          |  |                                                               |
| Duration                                   |  |                                                               |
| Environment                                |  |                                                               |

# Progressive overload

## Progressive overload

Training must continually challenge the individual by getting harder. Progressive Overload allows improvement for the specific sport, exercise or physical activity that is being trained for.

### **Example:**

Week 1 - Run 2.5km, 3 times per week

Week 2 - Run 4km, 3 times per week

Week 3 - Run 5km, 4 times per week

Week 4 - Run 5km, 5 times per week

# Progressive overload

## Other examples of progressive overload

### **Example:**

Week 1 - Run 2.5km, 3 times per week on treadmill

Week 2 - Run 4km, 3 times per week (treadmill & flat road)

Week 3 - Run 5km, 4 times per week (flat & hilly roads)

Week 4 - Run 5km, 5 times per week

What are some other ways you could apply progressive overload to this example? Discuss in pairs.

# Progressive overload

## Apply progressive overload

Tyson is trying to improve his abdominal strength and endurance. Before any training he tests out how long he can perform a plank. His time to hold a plank is 1 minute. He has a goal of completing a 2 minute plank in 4 weeks time.

Here is his week 1 training programme that he is completing 5x per week:

15x sit ups

15x v sits

15x russian twists each side

15x mountain climbers each side

15x tea pots with 6kg dumbbell each side

Repeat 4 times

In pairs, write 5 ways Tyson could apply Progressive Overload to his week 2 training session?

# rest

## rest

Training must incorporate sufficient rest to allow the body to recover.

Rest must be balanced and taken into consideration with other Principles like Progressive Overload & Intensity.

When Progressive Overload and Intensity increases in training sessions. Rest is just as important to allow your body to recover after challenging training sessions so that you can also train harder. Rest also prevents injury and can improve performance.

Training too often with not enough rest can negatively impact performance.

# time

## time

The length of the training session depends on the aspect of fitness being developed; training should last long enough for improvements to occur.

### **For example:**

A marathon takes the average person 2.5 hours to run. Therefore some training sessions would need go for as long as two hours to allow the body to become conditioned to that type physical activity for that long.

1. How long would you anticipate that the Tough Guy Tough Girl to take you to complete?
2. Depending on your answer for (1.), what length of time would your training sessions need to be?
3. How often do you think you would you need to train in a week to see improvements?
4. How would you apply specificity and progressive overload to your training sessions?

# frequency

## frequency

How often person trains - depends on their fitness level and the activity being trained for. Frequency refers to the number of times you workout in a week.

Frequency of training needs to be balanced with other principles. Frequency may need to be adjusted when Intensity or Progressive Overload in training is high. Frequency may also adjust to the Type of training someone is completing.

Example:

- A professional athlete may train up to 10 or more times per week or more. They are more than likely going to train twice a day.
- A relatively fit person may train 5-6 times per week and has a rest day.
- Someone may have to goal to improve their overall aerobic fitness may train 8 times per week - 3 sessions maybe running, 5 sessions could be going for walk

# frequency

## frequency

Write the your name and your answers on a post it note, for the following:

1. How many times a week do you train?
2. Thinking about the Tough Guy Tough Girl and your previous answer, how many sessions would you start off with training for Tough Guy Tough Girl in a week?  
The TGTG is 8 weeks away
3. Name three things that are going to do motivate you to train more for the Tough Guy Tough Girl
4. What is something you could do if your training frequency becomes low?

# intensity

## intensity

How hard a person trains - some activities require a greater intensity level than others; as a person's fitness improves they can increase their intensity of training.

Refers to how hard someone is working during exercise. As a person's fitness increases their intensity should also increase.

Intensity is used to measure how hard someone is training.  
To workout your Maximum Heart Rate (MHR):

$$220 \text{ (BPM)} - (\text{your age}) = \text{_____MHR}$$

1. Work out your Maximum Heart Rate

$$\frac{\text{BPM}}{\text{MHR}} \times 100 = \text{___ \% intensity}$$

type

10:00

## Type

The type of training varies according to the activity the person is training for.

Think of it as breaking down all the components of Fitness needed for a particular sport or activity and what types of training needs to be completed

1. Research what Hyrox is
2. What exercises are including in this event?
3. What components of fitness would you have to work on to be able to complete Hyrox?

**Arrange the components of fitness in order of importance for Hyrox**

# Level 2 PED

## Thurs 23 april

### Lesson 3

Do now

## Do now

In groups of 3-4 answer these questions, group with the best answers wins a prize:

1. What does the principle specificity mean?
2. Give one example of specificity in a sport or physical activity.
3. What is overload in training?
4. Give an example of how you can apply overload to your training.
5. What does the FIT acronym stand for?
6. Explain reps and sets.

**07:00**

# Learning intention

## Learning intention

Make sense and building knowledge of the Methods of Training

## Success criteria

- Name all the SPORT FIT Principles of Training
- Define what Principles of Training are
- Explain at least 3-5 Principles of Training
- Name the Methods of Training

Ila's: Thinking, Curious

# Methods of training

## Methods of training

The **TYPE** (Principle) of training refers to the method of training being used to develop a physical activity or sport.

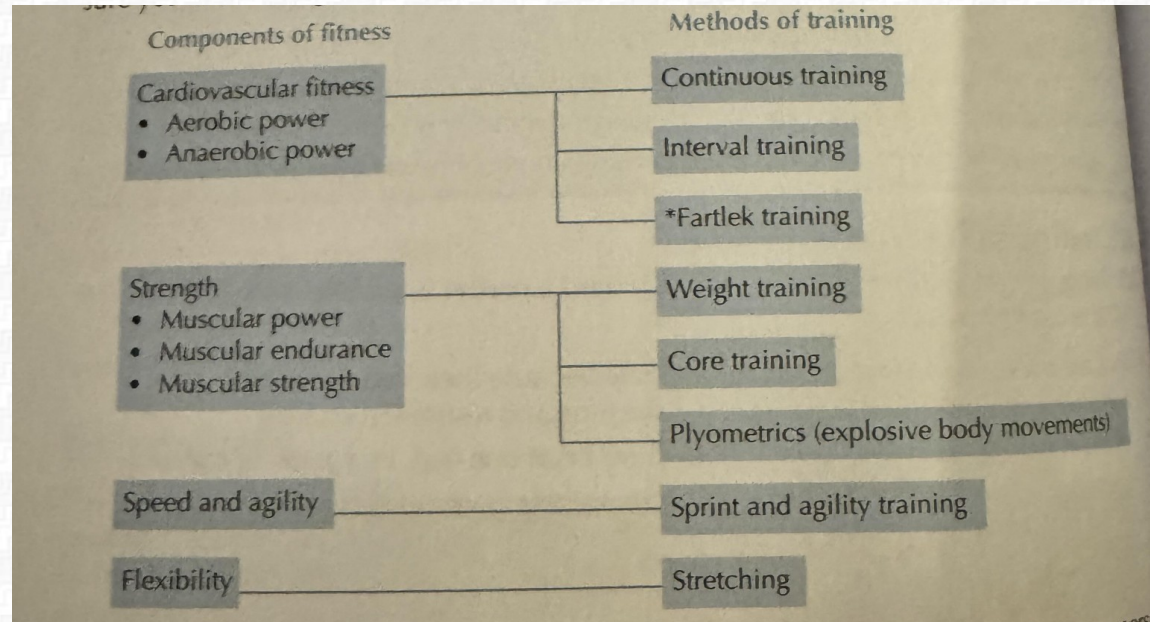

The Methods of Training include:

- Continuous
- Interval
- Fartlek
- Weight/Resistance
- Plyometric
- Core
- Sprint/Agility
- Stretching

# Methods of training

## Methods of training

Certain methods of training are specific to the Components of Fitness

# Continuous training

## Continuous training

Is training for a certain time without any rest. This type of training is more specific to improve aerobic and muscular endurance fitness. Continuous training is physical exercise that last longer than 20 minutes without rest and could look like running, cycling, swimming, boxing.

This type of training is usually performed at steady intensity that a person can maintain for 20-minutes or more.

What could be some advantages and disadvantages of applying continuous training to your training programme for Tough Guy Tough Girl?

# interval training

## Interval training

Exercise at high intensity for a short period of time and then rests to allow the body to work at the same intensity in the next period of work.

Interval training is beneficial for improving fitness quickly as it trains the body to work under high-intensity conditions.

Interval training develops aerobic fitness and is divided into work periods and rest periods. This is also known as the **work: rest ratio**

Any exercise can be used within a interval training session. Again the exercise needs to be specific to your fitness goal.

Some examples of interval training:

- Sprinting lampposts, running shuttles, running Goodmans, 30 secs on/30 secs off

# circuit training

## Circuit training

Consists of a person completing a variety of activities one after the other.

Circuit training can combine all methods of training into a single session

It can be used to improve any component of fitness and is extremely versatile

# Resistance training

## Muscular power

Combination of strength and speed put together to produce an explosive movement. This includes fast muscles contractions and you fatigue quicker.

Plyometric type exercises that improve muscular power:

- Box Jumps
- Squat Jumps
- Plyo push ups
- Jumping Lunges
- Hanging Jerks

# Resistance training

## Muscular strength

Muscles apply maximum force against resistance in a certain effort. Fatigue happens faster

Low Repetition and High Weight improves muscular strength.

# Resistance training

## Muscular endurance

Muscles working continuously for longer period of time. Slower muscle contractions and fatigue is slower. Muscular endurance is improved through continuous high repetition resistance training.

Exercise that improve muscular endurance:

- Push ups
- Chin ups
- Lunges
- Squats
- Kettlebell Swings

## 2.3 move to improve

### Move to improve

- Open Google Classroom
- Find your 2.3 Move to Improve Assessment
- As a class we are going to go through the assessment and start some of the first parts of the assessment

# Level 2 PED

## Tues 28 & weds 29 April

# To do list - part 1

## To do list - part 1

You must complete 2 of the 3 tasks on this slide and the next before Thursday to do practical lesson. If you have not the class will need to finish it on Thursday before

1. Complete the Planning part of your 2.3 Assessment
  - Leave sections **pre-test & exercise physiology** blank for now. Read the next slides on Sports Psychology and pick which two from the list below you are going to use as part of your training programme. Fill in this section on your Planning.

### Sports psychology

- Motivation
- Self-talk
- Visualization
- Mental rehearsal
- Routines
- Arousal control
- Goal setting
- Confidence
- Concentration

**OTHER TASKS on Next Slide**

# To do list - part 2

## To do list - part 2

2. Start planning out your training for Wk.3 in your 2.3 assessment doc. Add what sessions you do in your own time (include sports trainings you might have). We will do practical sessions on Wednesday and Thursdays lessons of Week 3 and will write these together
3. Complete the Principles & Methods of Training worksheet given by the reliever. Hand this in as I will be checking if it is completed or not.

**REMEMBER your PE Gear for THursday including running shoes and water. Whanau Tshirts only. No school shorts, pants or skirts.**

# Level 2 PED

## Tues 5 May

### Lesson 1

# Do now

## Do now

1. Open your 2.3 Move to Improve assessment
2. Write down your 2km pre-test results into the Planning sections of your assessment. It would be good to add your 1km split times
3. Finish the Principles and Methods of Training sections if you have yet to do this
4. If you have finished write a song on a post it note you would like on todays training session playlist for Mrs Tamihe

**10:00**

# Learning intention

## Learning intention

Make sense and build knowledge of circuit training

## Success criteria

- Collaborate to support each other through a circuit training session
- Complete my a training reflection log from todays lesson

Ila's: Thinking, Curious

# circuit training

## Recap - what is circuit training?

Consists of a person completing a variety of activities one after the other.

Circuit training can combine all methods of training into a single session

It can be used to improve any component of fitness and is extremely versatile

# circuit training

## Today's session:

1. Write this training session in your assessment in the Training Programme section of your assessment:

### Circuit Training Session

Station 1: Overhead Slam Balls (5x)

Station 2: Sandbags and Kettlebells Front Squat

Station 3: Hurdles and Agility Ladder

Station 4: Dumbbell Hammer Curls with Shoulder Press

Station 5: Medicine Balls Crunches & Wall Balls

3mins work, 1 min rest

2. Once you have completed this go to the next task on the next slide

# circuit training

## Training programme log

1. If you did any training yesterday, write this into the Monday section. Then write a reflection on this training session.
2. If you didnt do any training, write Rest Day and write a reflection about why you had a rest day

Follow the examples at the top to guide you with your reflections.

If you had a rest day, you can look at the **REST** Principle of Training on slide 18 to remind you of why rest is important to support your reflection

# psychology

## Examples of sports psychology

Mental Preparation  
Rehearsal  
Confidence

Visualisation

Routines

Self Talk

# Level 2 PED

## Thurs 7 May

### Lesson 2

# circuit training

Weds 6 may

2km run or 20 min Continuous Run

## Circuit Training Session

Station 1: Overhead Slam Balls (5x)

Station 2: Sandbags and Kettlebells Front Squat

Station 3: Hurdles and Agility Ladder

Station 4: Dumbbell Hammer Curls with Shoulder Press

Station 5: Medicine Balls Crunches & Wall Balls

3mins work, 1 min rest

# circuit training

thurs 7 may

- 2 or 3 ppl per station max

Station 1 - Sit Ups

Station 2 - Burpees

Station 3 - KB/DB Swings

Station 4 - Running

Station 5 - Skipping

Station 6 - DB Lunges

1 min work, 30 seconds rest x2

# Level 2 PED

## Tues 12 May

### Lesson 1

Do now

**Checklist:** Open your 2.3 Move to Improve assessment!

✓ Complete the following sections on your planning:

- Pre-Test, Methods, Principles and Sports Psychology

✓ Add any training to week one of your training programme that you did on Fri, Sat, Sun. Complete any reflections from any sessions you did last week. They don't have to be long.

**Mrs Tamihere needs to check your work before the end of the timer!**

15:00

# training

Copy this image into tuesday in wk.2 of your training programme

**Interval Training - Running**

| Phase      | Duration  | Activity                                | Intensity      |
|------------|-----------|-----------------------------------------|----------------|
| Interval 1 | 3 Minutes | Perimeter runs around the turf.         | 70% Max Effort |
| Recovery   | 1 Minute  | Slow walk / Dynamic stretching.         | Low            |
| Interval 2 | 2 Minutes | "Shuttle" sprints (width of the turf).  | 85% Max Effort |
| Recovery   | 1 Minute  | Slow walk / Deep breathing.             | Low            |
| Interval 3 | 3 Minutes | Perimeter runs (reverse direction).     | 75% Max Effort |
| Recovery   | 1 Minute  | Slow walk / Hydration.                  | Low            |
| Final Push | 2 Minutes | Shuttle Sprints (Length of the turf)    | 80% Max Effort |
| Reflection | 7 Minutes | Students record notes in training logs. |                |

# Level 2 PED

## Weds 13 May

### Lesson 2

# Do now part 1

## Part 1

- ✓ Finish any reflections from Week 1 of your training programme **INCLUDING** your 7-day reflection
- ✓ Add any training you may have done yesterday into Week 2's training programme
- ✓ Evidence - if you use any apps on your phone to log workouts you can screenshot these to add to your evidence for your training logs

**COMPLETED all the above - move to DO NOW Part 2 on next slide**

Do now  
part 2

Copy this image into wednesday in wk.2 of your training programme

25min Run

PLUS

**COMPLETED  
all the  
above -  
move to DO  
NOW Part 3**

#### Circuit Training

| Station           | Activity      | Duration (min) | Equipment              |
|-------------------|---------------|----------------|------------------------|
| Station 1         | Goblet Squat  | 1              | Kettlebells / Sandbags |
| Rest & transition |               | 1              |                        |
| Station 2         | Plank         | 1              | Bodyweight             |
| Rest & transition |               | 1              |                        |
| Station 3         | Reverse Lunge | 1              | Bodyweight             |
| Rest & transition |               | 1              |                        |
| Station 4         | Calf Raises   | 1              | Bodyweight             |
| Rest & transition |               | 1              |                        |
| Station 5         | Step-ups      | 1              | Boxes                  |

# Learning intention

## Learning intention

Make sense and building knowledge of Exercise Physiology

## Success criteria

- Name states of Exercise Physiology
- Select two Exercise Physiology that you would to focus on in your training programme

Ila's: Thinking, Curious

# Level 2 PED

## Thurs 14 May

### Lesson 3

# Do now

## Do now

- ✓ Finish any reflections from Week 1 of your training programme **INCLUDING** your 7-day reflection
- ✓ Complete your reflection from yesterday's session
- ✓ Put today's session in your books, see below:

BEEP Test

# Do now part 1

## Part 1

- ✓ Finish any reflections from Week 1 of your training programme **INCLUDING** your 7-day reflection
- ✓ Add any training you may have done yesterday into Week 2's training programme
- ✓ Evidence - if you use any apps on your phone to log workouts you can screenshot these to add to your evidence for your training logs

**COMPLETED all the above - move to DO NOW Part 2 on next slide**

# Level 2 PED

## Weds 19 May

### Lesson 2

Do now

## Do now - A to Z

Get into groups of 4-5. You will be placed in groups by your Learning Leader and work in these groups throughout today's class through different activities to win this week's prize

Name keywords that relate the following Exercise Physiology systems:

**Muscular Systems**

**Respiratory System**

**Cardiovascular System**

**Energy Systems**

**07:00**

# Learning intention

## Learning intention

Make sense and build knowledge of exercise physiology systems

## Success criteria

- Name two types of energy systems
- Name at least 10 muscles
- Explain Cardiovascular & Respiratory systems

Ila's: Thinking, Curious

# Muscular systems

## Muscular systems

The muscular system is made up of muscles that help the body move. Muscles work together with bones and joints to create movement during physical activity.

There are three main types of muscles:

1. Skeletal muscles – attached to bones and used for movement
2. Smooth muscles – found inside organs
3. Cardiac muscle – found only in the heart

In PE and sport, we mainly focus on skeletal muscles.

# Challenge no.2

## Name as many muscles

Work in your groups to label the muscles on the worksheet.

These must be the scientific names for the muscle or be close too

Once you have finished bring your worksheet up to be marked.

First to finish OR team with the most correct at the end of the timer, wins max points!

**05:00**

# Muscle systems

## How to develop & build muscle?

Regular exercise

High Protein diet

Strength/Resistance Training

Muscular Endurance Training

# Energy systems

## Challenge no.3

In your groups work together to take down notes related to this 5min video lesson. There is a quiz at the end. You will need to write down your answers on a sheet of paper you will be given when the quiz starts.

# Cardiovascular system

## Cardiovascular system

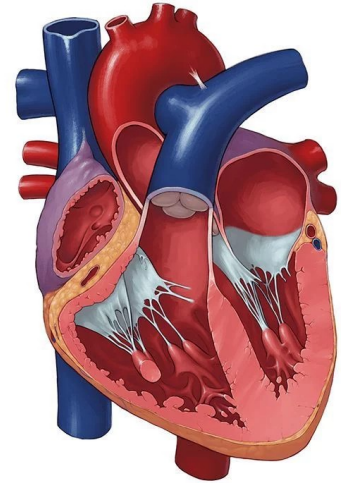

The cardiovascular system transports oxygen, nutrients and waste products around the body.

Main parts include:

- Heart
- Blood
- Blood vessels

During exercise:

- Heart rate increases
- Blood flow increases
- More oxygen is delivered to working muscles

# respiratory system

## Respiratory system

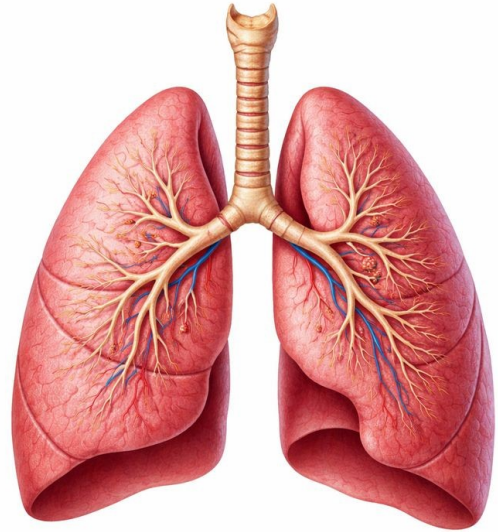

The respiratory system brings oxygen into the body and removes carbon dioxide.

Main parts include:

- Nose and mouth
- Trachea
- Lungs
- Diaphragm

When exercising:

- Breathing rate increases
- More oxygen enters the body
- Carbon dioxide is removed faster

# Challenge no.4

## Challenge no.4

In your groups, explain in a short paragraph (3-4 sentences) of how the Cardiovascular and Respiratory systems may help to develop your Aerobic fitness system. In one of your sentences give an example from the training that you have done so far.

Once completed hand it in for marking before the timer ends!

**10:00**

# planning

## planning

Go to your planning page of your 2.3 assessment.

Complete the Exercise Physiology section and select one of the Energy Systems - Aerobic, Anaerobic, ATP (think about which is most suited for the training we are doing or where you are going to get the most improvement)

Pick a muscle group you are wanting to improve over this training period.

**10:00**

# finisher

finish

Complete any other reflections from Wk.1 and/or Wk.2 of the training programme.

What you don't finish today needs to be completed in your own time at home!

Wk.3 Training - Practicals, all outside mostly long runs

**10:00**

# Level 2 PED

## Tues 26 May

### Lesson 1

## 2.3 move to improve

### Today's session

Interval Training

Total: 4km or 5km of running

4-5x 1km run with 1minute rest in between

Complete your reflection from this session

# Level 2 PED

## Weds 27 May

### Lesson 2

## 2.3 move to improve

### Today's session

Continuous Training

30min Run

Complete your reflection from this session

# Level 2 PED

## Thurs 28 May

### Lesson 3

## 2.3 move to improve

### Today's session

Continuous Training

35min Run

Complete your reflection from this session

# Level 2 PED

## Tues 2 june

### Lesson 1

## 2.3 move to improve

### Today's session - tues 2nd june

Interval Training

Run for 2mins, 2min rest x4

Complete your reflection from this session

# Level 2 PED

## Weds 3 june

### Lesson 2

# Learning intention

## Learning intention

Make sense and build knowledge 2.3 Task Report, Intensity and

## Success criteria

- Complete Tthe Intensity, Confirmation and Report Tasks set for todays lesson

Ila's: Thinking, Curious

# intensity

## Intensity task - part 1

Work out your intensity from yesterday's PE practical.

Use the photo on the slide to find your average Heart Rate over the 4 rounds of running.

Add all four numbers together than divide by 4. Eg  
 $180+170+160+170 = 680/4 = 170$

## Intensity task - part 2

### **Equation for Intensity:**

Heart Rate divided by Max HR x 100 = Intensity (%)

Maximum HR for 16 yr old = 204

Maximum HR for 17yr old = 203

### **Using example from previous slide:**

$170/204 = 0.833$

$0.833 \times 100 = 83.3\%$  intensity

# intensity

Write about your intensity in your reflections? Were you working over the 80% intensity goal set for this training session?

|                 | Intensity |       |       |   |
|-----------------|-----------|-------|-------|---|
|                 | 1         | 2     | 3     | 4 |
| Kathleen - 170  | - 180     | - 187 | - 184 |   |
| Gabby - 171     | - 183     | - 182 | - 192 |   |
| Sushi - 129     | -         | - 178 | - 189 |   |
| Mithilesh - 174 | - 173     | - 180 | - 184 |   |
| Ikan - 189      | - 193     | - 183 | - 170 |   |
| Taylen - 190    | - 190     | - 193 | - 170 |   |
| Sean - 160      | - 163     | - 161 | - 170 |   |
| Gabriel - 139   | - 142     | - 168 | - 153 |   |
| Eythan - 168    | - 178     | - 188 | - 181 |   |
| Shivaan - 160   | - 156     | - 178 | - 180 |   |
| Parneet -       | - 190     | - 195 | - 193 |   |

# Tgtg Confirmation

## Tgtg Confirmation

Email Mrs Tamihere confirming that you will be coming to the TGTG trip to complete your practical performance assessment.

You need to confirm you are coming by this Thursday 4 June to be registered for the race

Please bring your permission slip back and hand in to PE office or to me in class

# 2.3 report task

## Part 1 - Go to the task report section of your 2.3 move to improve

Spend 5-mins reading Task 1, 2, 3 & 4

In pairs, answer the following questions on paper:

1. What does task 1 ask you to do?
2. What does Task 2 involve?
3. What does Task 3 ask you to do?
4. What does Task 4 involve?

Look at the marking criteria

5. What is the difference between Achieved, Merit and Excellence?

## 2.3 report task

### Part 2 - Start task 1

Start Task 1 of your task report.

You can finish most of the sentence starters even though we have not finished our training programme

# Reflection tips

## Reflection example

**Reflection:** include the intensity worked at, how you felt, your progress, sport psychology used & what you would change for the next workout.

What was good about the session? What did you enjoy? How was the difficulty? What did you do to help your motivation? Were you tired or well rested? What was your energy level like? Did you have the correct gear?

Did you use music to help your motivation? Did you train with others?

How was your training helping you prepare for TGTG? What was similar or different?

*My intensity for today's session was 80% because we did a continuous training session and my goal was to run without stopping as opposed to running at a fast pace. I felt that session was hard but manageable. What helped me get through the session was using self talk by telling myself I could keep moving and run the full 30mins. I liked that I was able to achieve this goal of running continuously for 30 mins because it gives me confidence going into the TGTG challenge. I had a good amount of energy as I ate the right amount of food at the right time before training. Training with others gives me motivation to keep going and work hard. Next time I will track my run on strava to make sense of my pace and track improvements to my overall pace.*

# Level 2 PED

## Thurs 4 june

### Lesson 3

## 2.3 move to improve

### Today's session

Continuous Training

35min Run

Complete your reflection from this session

# Level 2 PED

## Tues 9 june

### Lesson 1

## 2.3 move to improve

### Today's session

Continuous Training

30min Run

Complete your reflection from this session

# Level 2 PED

## Weds 10 june

### Lesson 2

## 2.3 move to improve

### Today's session

#### Interval Training

5x 3min running, 1min rest

(20mins)

#### Circuit Training

1. Box Jumps
2. Sit Ups
3. Battle Ropes
4. Squats
5. Reverse Lungers
6. Overhead Dumbbell Press
7. Agility Ladder  
work, 30sec rest x1
8. Running  
(12mins)

1min

# Level 2 PED

## Thurs 11 june

### Lesson 3

# Do now

## Do now

1. Copy yesterday's training sessions (on slide 93) into your training log
2. Complete a reflection - write about your intensity during the session, what sports psychology and methods of training you used

To work out your intensity:

3. First add all your HR in image together, divide by how many readings

**2. Intensity =  $\frac{\text{HR}}{\text{Max HR}} \times 100$**

Max HR 17yrs = 203

Max HR 16yrs = 204

| HR        |       |       |       |             |
|-----------|-------|-------|-------|-------------|
| Jivarz    | - 156 | - 142 | - 153 | - 173       |
| Aaraliah  | - 124 | - 110 | - 121 |             |
| Gabby     | - 170 | - 185 |       |             |
| Crabriel  | - 138 | - 160 | - 142 | - 125 - 163 |
| Shivaan   | - 166 | - 150 | - 151 |             |
| Armaan    | - 185 | - 159 | - 140 | - 168       |
| Ikam      | - 165 | - 160 |       |             |
| Sisile    | - 119 | - 156 | - 146 | - 173       |
| Markley   | - 123 | - 129 | - 152 | - 156       |
| Sean      | - 166 | - 128 | - 169 |             |
| Mithilesh | - 120 | - 196 | -     |             |
| Deisharn  | 141   | - 160 | - 111 | -           |
| Eythar    | - 180 |       |       |             |
| Taiana    | - 166 | - 190 | - 173 |             |
| Parneet   | - 190 | - 147 | - 119 | - 123       |
| Taylen    | - 159 | - 158 | - 159 | - 153       |
| Jcnn      | - 198 | - 200 | -     |             |

# Level 2 PED

## Tues 23 june

### Lesson 1

# Do now

**Do now:** Write your answers down on a piece of paper or book.

1. Which Method of Training did you find most beneficial for the TGTG?

**Continuous, Interval, Circuit, Speed/Agility, Resistance**

2. What Sports Psychology Method did you use during the TGTG challenge?? Give an example of when you used it.

# Learning intention

## Learning intention

Make sense and build knowledge 2.3 Task Report

## Success criteria

- Recall Principles & Methods of Training
- Complete my reflection section of my 2.3 Task Report
- Use my planning to start Task 1 of my Task Report

Ila's: Thinking, Curious

# Principles of training

## Principles

Are a set or rules or guidelines used to support training or a training programme

Name the principles

**S**      **P**      **O**      **R**      **T**      **F**      **I**  
**T**

# Principles of training

## Task

Get into pairs, each pair will be given a principle and 5 minutes to research and write up as much information as possible about each principle and feed this back to the rest of the class

5:00

# Planning & reflection

## Planning & Reflection

1. Collect your printed planning document from your 2.3 Move to Improve assessment
2. Read through your planning doc
3. Use your planning document to complete the Reflection section of your 2.3 Move to Improve assessment

Dont worry about the Energy Systems part, we will review this more tomorrow.

If you feel confident completing the Sports Psychology complete, otherwise leave it and we will review this tomorrow

If you finish this, go back and complete anything

# Level 2 PED

## Weds 24 june

### Lesson 2

# Do now

**Do now:** Write your answers down on a piece of paper or book.

1. Which energy system was most needed for the TGTG and why?

**Anaerobic energy, Aerobic energy or ATP-CP energy system** - use your CB to look up what these mean

2. What are the key organs used to ensure the following systems are working:

Respiratory  
Muscular

# Learning intention

## Learning intention

Make sense and build knowledge 2.3 Task Report

## Success criteria

- Recall Methods of Training
- Complete my reflection section of my 2.3 Task Report

Ila's: Thinking, Curious

# Methods of training

## Task

In groups of 3-4 you will spend 1 min writing as much as you know about the Method of Training on the A4 piece of paper in front of you. Pick a felt pen the same colour as your groups. After 1-minute we will move to the next piece of paper.

# Task report writing

## Planning & Reflection

1. Complete your Reflection section of your 2.3 Move to Improve
2. Complete the sentence starters from Task 1 in the Task Report
3. Use the Move to Improve sentence starters (on Google Classroom) to complete Task 2, 3 and 4 of your Task Report

**AT EACH OF THE ABOVE** stages, get your work checked by Mrs Tamihere

**IN YOUR OWN TIME** - ensure all your Training Log is up to date, all reflections and 7-day reflections

# Level 2 PED

## Weds 24 june

### Lesson 2

# Do now

Do now:

*“Exercise Physiology is the concept of **energy systems** (Anaerobic, ATP-CP, Aerobic) and **organ systems** (Cardiovascular, Respiratory & Muscular System)”*

Use Google to help you find answers to the following:

1. How does the cardiovascular system work during exercise? Explain.
2. What is the function of the muscular system during exercise?
3. How does the aerobic energy system work?

Work in three groups and type your answers on the next slide **in your own words**

## Do now:

1. How does the cardiovascular system work during exercise?  
Explain.

Answer here

2. What is the function of the muscular system during exercise?

Answer here

3. How does the aerobic energy system work?

Answer here

# answers

## Do now:

1. What is the function of the muscular system during exercise?

Answer here

2. How does the aerobic energy system work?

Answer here

# Learning intention

## Learning intention

Make sense and build knowledge 2.3 Task Report

## Success criteria

- Make connection between Exercise Physiology and Training
- Complete my reflection section of my 2.3 Task Report

Ila's: Thinking, Persevering

# Task report writing

## Task report

- ✓ **EVERYONE** needs to complete Task 1 before the end of the lesson
  - ✓ **USE** the sentence starters on Google Classroom to complete Task 2, 3 & 4
  - ✓ **USE** the laminated fact sheets to prompt your thinking when writing the report
- ALL** Planning, Training Log Reflections and Overall Reflection sections need to be completed in your own time. It is recommended that you work on your Task Report at home too!
