

The background features a grayscale photograph of several runners on a track, with a large, stylized topographic map overlaying the scene. A target graphic consisting of three concentric circles (blue, green, and orange) is positioned on the left side, partially obscuring the runners. The title text is placed to the right of the target.

The Echoing Whānau: Understanding the Socio-Ecological Perspective in HPE

**Year 9 Health and
Physical Education**

The Game Plan: How to Succeed This Term

Theory

Completing your workbook to a high standard.

Practical

Coming prepared with PE uniform and giving activities a go.

Engagement

Positively engaging with your classmates and whānau mentor class.

Aiming for Exemplary (EX)

Engage exceptionally well. Correctly identify who and what makes up each perspective. Describe barriers and enablers in NZ using examples, and explain their impacts across all three levels.

The Ripple Effect: Nothing Happens in a Bubble

Every choice we make about physical activity is a ripple effect. It starts with you, but it is shaped by everything around you.

Layer 1: Personal

The individual's own attitudes, knowledge, physical skills, and mindset.

"I enjoy running," "I know the rules of netball," or "I feel confident catching a ball."

Workbook Task 1: Write your definition and draw your image for 'Personal'.

Layer 2: Interpersonal

The direct influence of the people closest to us: whānau, friends, peers, and teachers.

"My friends are all playing touch at lunch," or "My parents encourage me to join a team."

Workbook Task 1: Write your definition and draw your image for 'Interpersonal'.

Layer 3: Societal

The wider community structures, NZ laws, media, culture, and facilities that shape our world.

“Our town built a free local skatepark,” or “National funding keeps youth sports affordable.”

Workbook Task 1: Write your definition and draw your image for ‘Society’.

The Complete Picture

**Workbook Task 2: Use this map to fill in your empty model.
Brainstorm as many examples as you can for each of the three layers.**

The Forces at Play: Barriers vs. Enablers

Barriers

Things that block, hinder, or make it difficult to participate in physical activity.

Example: No transport to the game.

Workbook Task 3:
Define and draw
Barriers and Enablers.

Enablers

Things that encourage, support, or make it easier to participate in physical activity.

Example: School provides free sports gear.

The Fairness Factor: Equal vs. Equitable

EQUAL

Giving every single player a size 9 shoe.

Everyone got the exact same thing, but nobody can play well.

EQUITABLE

Giving every player a shoe that fits their specific foot size.

Everyone got what they needed to succeed.

Workbook Task 4: Design a piece of visual art in your book that demonstrates this difference.

**When money is scarce,
affording sport is too
high a hurdle for many.**

— Stuff.co.nz

Real World Impact: Mary's Story

- Full-time salary doesn't stretch to cover fees, uniforms, and shoes.
- Only two kids can play at a time; others stand on the sidelines.
- Youngest boys have never been in a team.
- Four daughters share netball equipment.
- Parents sacrifice food, bills, and family outings.

Dissecting the Struggle

Workbook Task 5a-d: Highlight the article and explain these impacts in your own words.

Class Wānanga: The Societal Ripple

Think about:
Community health...

Think about:
National sports talent...

If Mary's story is happening to families all over Aotearoa, what happens to our society as a whole?

Think about:
Social divides between
rich and poor towns...

Think about:
Empty local clubs...

Taking it to the Field

Theory time is over. Next up: Action. Every practical activity this term is a chance to spot these forces in real life. We aren't just playing games; we are observing how barriers and enablers change the way we participate.

The Reflection Blueprint

The Setup: Today's activity was [Name Activity]. One [Barrier/Enabler] was [Identify it] because [How it changed participation].

Personal Impact: It was [Positive/Negative] for ME because [Specific Example].

Interpersonal Impact: It was [Positive/Negative] for MY CLASSMATES because [Specific Example].

Societal Link: In the real world, this compares to [Community Situation] and impacts [Who] because [Why].

Remember:
Complete this blueprint in your workbook after every practical activity.
